

Number, Place Value and Rounding

Key vocab: thousands, four-digit, negative number, one thousand more, one thousand less, decimal, decimal place, rounding, place holder, nearest ten, nearest hundred, nearest thousand, one place, whole number, integer, tenths, hundredths

NC Objectives:

- Count backwards through zero to include negative numbers.
- Identify, represent, and estimate numbers using different representations.
- Recognise the place value of each digit in a 4-digit number.
- Solve number problems and practical problems that involve place value.
- Read Roman Numerals to 100 (I to C) and understand that over time, the numeral system changed to include the concept of zero and place value.

| Concrete | Pictorial | Abstract |

Number, Place Value and Rounding

Key vocab: thousands, four-digit, negative number, one thousand more, one thousand less, decimal, decimal place, rounding, place holder, nearest ten, nearest hundred, nearest thousand, one place, whole number, integer, tenths, hundredths

NC Objectives:

- Count in multiples of 25 and 1000.
- Find 1000 more or less than a given number.

Reasoning

Whitney is counting in 25s and 1,000s. She says:

- Multiples of 1,000 are also multiples of 25
- Multiples of 25 are therefore multiples of 1,000

Do you agree with Whitney? Explain why.

Ron is counting down in 25s from 790. Will he say 725?

Explain your answer.

Complete the missing boxes:

10 less than my number is 1,000 more than 5,300. What is my number?

Can you write your own problem similar to this?

Fill in the boxes by finding the patterns:

Jack says:

When I add 1,000 to 4,325, I only have to change 1 digit.

Is he correct? Which digit does he need to change?

Zippy Onion also claims that he can make a number which is 1000 less than 3512 using the number cards 1, 2, 3 and 4.

Do you agree with him? Explain your thinking.

Number, Place Value and Rounding

Key vocab: thousands, four-digit, negative number, one thousand more, one thousand less, decimal, decimal place, rounding, place holder, nearest ten, nearest hundred, nearest thousand, one place, whole number, integer, tenths, hundredths

NC Objectives:

- Compare and order numbers beyond 1000.

Concrete

Use different materials to create number sentences which compare and order numbers beyond 1,000 correctly.

Rearrange four counters in the place value chart to make different numbers.

| 1000s | 100s | 10s | 1s |
|-------|------|-----|----|
| | | | |

Record all your numbers and write them in descending order.

Pictorial

Order the following in ascending order.

Abstract

Circle the smallest amount in each pair.

- Two thousand, three hundred and ninety seven 3,792
- 6,000 + 400 + 50 + 6 6,455
- 9 thousands, 2 hundreds and 6 ones 9,602

Order the following from the least to greatest.

| | | | | |
|-------|-------|-------|-------|-------|
| 1,450 | 5,550 | 500 | 9,080 | 6,510 |
| 645 | 54 | 6,790 | 8,000 | 1,700 |
| 7,100 | 700 | 9,600 | 100 | 1,000 |

4. Tick all of the numbers which are greater than 3,000 but less than 7,000.

A 7,453

B 2,000 + 200 + 20 + 13

C Fill in the circle using <, > or =

| Thousands | Hundreds | Tens | Ones |
|-----------|----------|------|------|
| ●●● | ●●● | ●●● | ●●● |

E six thousand, two hundred and ninety-one

Here are four digit cards:

Arrange them to make as many different 4-digit numbers as you can and put them in ascending order.

| | | |
|---------------|---------------|---------------|
| 2,700 ○ 2,200 | 600 ○ 6,000 | 1,000 ○ 1,009 |
| 2,500 ○ 8,500 | 7,100 ○ 7,800 | 9,990 ○ 9,900 |

Reasoning

I am thinking of a number. It is greater than 3,000, but smaller than 5,000

The digits add up to 15
What could the number be?

Write down as many possibilities as you can.

The difference between the largest and smallest digit is 6. How many numbers do you now have?

Put these amounts in ascending order.

Half of 2,400 LXXXVI

Use digit cards 1 to 5 to complete the comparisons:

$$564 \square < \square 73 \square$$

$$2 \square 38 > 23 \square 5$$

You can only use each digit once.

Alex has ordered five 4-digit numbers. The smallest number is 3,450, and the largest number is 3,650

All the other numbers have digit totals of 20

What could the other three numbers be?

What mistake has been made?

Put one number in each box so that the list of numbers is ordered smallest to largest.

| 1000s | 100s | 10s | 1s |
|-------|------|-----|----|
| 1 | 1 | | 3 |
| 1 | | 2 | 7 |
| 1 | 2 | 5 | |
| 1 | | 5 | 9 |
| 1 | 3 | 8 | |
| 1 | | 1 | 5 |

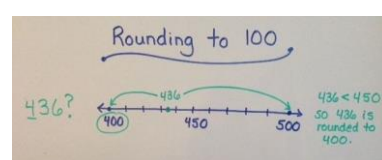

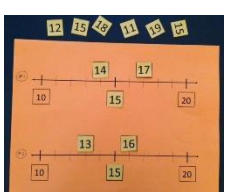

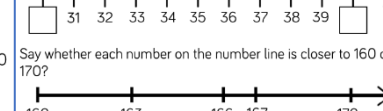

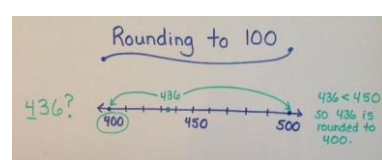

Can you find more than one way?

Reasoning

Explain

163 and 238 round to the same 100.
163 and 238 round to a different 10.

Explain why.

Explain the mistakes

What is 245 rounded to the nearest 10?

- Mistake 1: 50
Mistake 2: 240
Mistake 3: 200

Which answer?

What is the largest whole number that, when rounded to the nearest 10, is 150?

- (a) 149
(b) 154
(c) 155

How many ways?

Rounded to the nearest 10, my number is 250.
Rounded to the nearest 100, my number is 300.
My number is odd.

What could my number be?

- Level 1: I can find one possible answer
Level 2: I can find different possible answers
Level 3: I know how many possible answers there are

David's mum and dad are buying a car.

They look at the following cars:

Are all of the cars correctly advertised?

Explain your reasoning.

A number is rounded to the nearest thousand.

The answer is 7,000

What could the original number have been?

Give five possibilities.

What is the greatest number possible?

What is the smallest number possible?

Addition and Subtraction

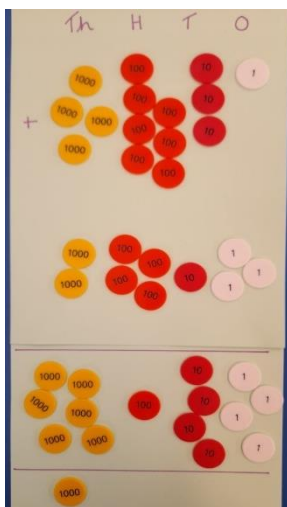

Key vocab: two-step problems, context, four-digit

NC Objectives:

- **Add** numbers with up to 4 digits, using formal written methods of columnar addition and subtraction where appropriate.
- Estimate and use the inverse operations to check answers to a calculation.
- Solve **addition** and subtraction two-step problems in contexts, deciding which operations and methods to use and why.

Concrete

- Use place value counters and/or Base 10 to solve addition calculations.

Pictorial

Addition and Subtraction

Key vocab: two-step problems, context, four-digit

NC Objectives:

- **Subtract** numbers with up to 4 digits, using formal written methods of columnar addition and subtraction where appropriate.
- Estimate and use the inverse operations to check answers to a calculation.
- Solve addition and **subtraction** two-step problems in contexts, deciding which operations and methods to use and why.

Multiplication and Division

Key vocab: derived facts, factors, factor pairs, scaling problems, three-digit

NC Objectives:

- Count in multiples of 6, 7 and 9.
- Use place value and known and derived facts to multiply and divide mentally, including multiplying by 0 and 1; dividing by 1; multiplying together three numbers.
- Recognise and use factor pairs and commutativity in mental calculations.
- Recall and use multiplication and division facts up to 12x12.

Multiplication and Division

Key vocab: derived facts, factors, factor pairs, scaling problems, three-digit

NC Objectives:

- Multiply 2-digit and 3-digit numbers by a 1-digit number using formal written methods.
- Recall and use multiplication and division facts up to 12×12 .
- Estimate and use the inverse operations to check answers to a calculation.
- Solve problems involving multiplying and adding, including using the distributive law to multiply 2-digit numbers by one digit, integer scaling problems and harder correspondence problems, such as n objects are connected to m objects.

Multiplication and Division

Key vocab: derived facts, factors, factor pairs, scaling problems, three-digit

NC Objectives:

- Divide 2-digit and 3-digit numbers by a 1-digit number using formal written methods.
- Recall and use multiplication and division facts up to 12x12.
- Estimate and use the inverse operations to check answers to a calculation.
- + - x ÷ Solve mixed operation questions.

Four children attempt to solve this problem.

- Alex says it's 1
- Mo says it's 9
- Eva says it's 9 r 1
- Jack says it's 8 r 5

Can you explain who is correct and the mistakes other people have made?

Whitney is thinking of a 2-digit number that is less than 50

When it is divided by 2, there is no remainder.

When it is divided by 3, there is a remainder of 1

When it is divided by 5, there is a remainder of 3

What number is Whitney thinking of?

Rosie writes,
 $85 \div 3 = 28 \text{ r } 1$

She says 85 must be 1 away from a multiple of 3
Do you agree?

Which calculation is the odd one out?

$65 \div 3$

Fractions, Decimals and Percentages

Key vocab: hundredths, decimal, decimal place, one decimal place, two decimal places, round decimals, whole number, common equivalent fractions, decimal equivalents, dividing, ones, tenths, hundredths, simple measure, money problems

NC Objectives:

- Count up and down in hundredths.
- Recognise that hundredths arise when dividing an object by one hundred and dividing tenths by ten.
- Find the effect of dividing a 1-digit or 2-digit number by 10 and 100, identifying the value of the digits in the answer as ones, tenths and hundredths.
- Recognise and write decimal equivalents on any number of tenths or hundredths.

Concrete

- Move counters on a place value chart to the left or right to show \times and \div of 10/100.

Pictorial

What fractions and decimals are represented in these diagrams?

Eva uses counters to make a 1-digit number.

To divide the number by 10, we move the counters one column to the right. What is the value of the counters now?

Use this method to solve:

$$3 \div 10 = \square \quad 7 \div 10 = \square \quad \square = 4 \div 10$$

Complete the table.

| Image | Words | Fraction | Decimals |
|-------|---------------|------------------|----------|
| | 56 hundredths | | |
| | | $\frac{17}{100}$ | |
| | | | 0.2 |
| | | | |

Abstract

- Count out loud forwards and backwards in hundredths.

1. $\frac{76}{100} = 0.76$

2. $\frac{49}{100} = \underline{\hspace{2cm}}$

3. $\frac{20}{100} = \underline{\hspace{2cm}}$

$70 \div 100 = \underline{\hspace{2cm}}$

$6 \times 10 = \underline{\hspace{2cm}}$

$2 \times 100 = \underline{\hspace{2cm}}$

$28 \div 10 = \underline{\hspace{2cm}}$

Reasoning

Who is correct?

5 hundredths is equivalent to 50 tenths.

Dora

50 hundredths is equivalent to 5 tenths.

Amir

Explain why.

Teddy says,

45 divided by 100 is 0.45 so I know 0.45 is 100 times smaller than 45

Mo says,

45 divided by 100 is 0.45 so I know 45 is 100 times bigger than 0.45

Who is correct?

Explain your answer.

Place the decimals on the number line.

2.7 2.3 1.9 2.5 2.9 3.2

Which order did you place your numbers on the number line?

Who is correct?

1.2 is equivalent to 1 whole and 2 tenths.

Annie

1.2 is equivalent to 12 tenths.

Dexter

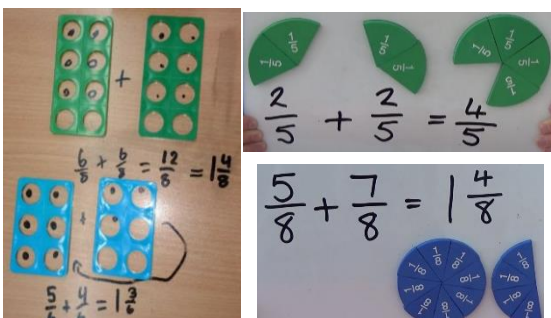

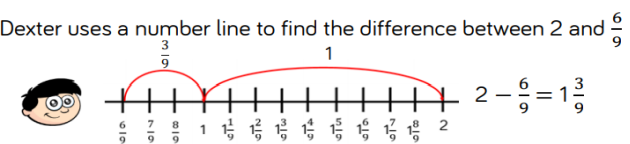

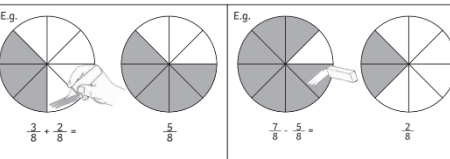

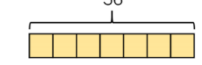

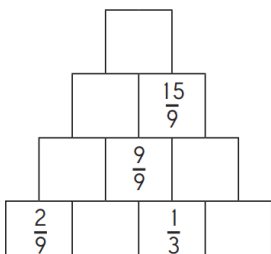

Explain why.

Reasoning

How many ways?

Fill in the missing numbers:

$$\frac{7}{10} - \frac{\square}{10} > \frac{\square}{10} + \frac{3}{10}$$

Level 1: I can find a way

Level 2: I can find different ways

Level 3: I know how many ways there are

Rank by difficulty

$$\frac{4}{5} + \frac{1}{5}$$

$$\frac{3}{4} + \frac{3}{4}$$

$$\frac{3}{7} + \frac{2}{7}$$

$$\frac{1}{2} + \frac{2}{4}$$

Alex is adding fractions.

$$\frac{3}{9} + \frac{2}{9} = \frac{5}{18}$$

Is she correct? Explain why.

Fill the gaps

$$\frac{3}{8} - \frac{2}{8} = \frac{5}{8}$$

$$\frac{3}{8} + \frac{\square}{8} = 1$$

$$\frac{3}{8} - \frac{2}{\square} = \frac{\square}{8}$$

Dora is subtracting a fraction from a whole.

$$5 - \frac{3}{7} = \frac{2}{7}$$

Can you spot her mistake? What should the answer be?

Match the number stories to the correct calculations.

Reasoning

Use each digit card **once** to make the statement correct.

3.□□ > □.□□

Can you find eight different possible solutions?

Using these cards can you make a number between 4.1 and 4.61?

What is the smallest number you can make using all four cards?
What is the largest number you can make using all four cards?

Use three digit cards to make the greatest possible number.

Use three digit cards to make the smallest possible number.

Some children have planted sunflowers and have measured their heights.

| Child | Height |
|--------|--------|
| Beth | 1.23 m |
| Tony | 0.95 m |
| Rachel | 1.02 m |
| Kate | 1.2 m |
| Faye | 99 cm |
| Emma | 0.97 m |

Order the children based on the heights of their sunflowers in both ascending and descending order.

Spot the Mistake

Rosie is ordering some numbers in ascending order:

0.09 < 0.99 < 10.01 < 1.35 < 9.09

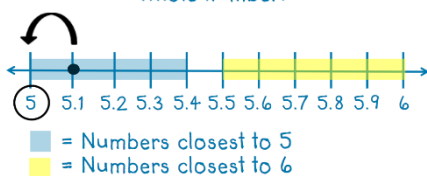

Can you explain her mistake?

Reasoning

Gregg is thinking of a decimal.

My decimal rounds up to 4. It is greater than 35 tenths. The digit in the tenths column is odd. The digits in the ones and tenths columns add up to 12.

What is the decimal Gregg is thinking of?

A number with one decimal place rounded to the nearest whole number is 45

What could the number be?

Mo says 0.4 rounded to the nearest whole number is zero.

Whitney says 0.4 rounded to the nearest whole number is one.

Who is correct? Why?

Ella used number cards to make two decimals, but then her number cards got mixed up!

She remembers that her decimals rounded to 3 and 7. What were the two decimals Ella made?

Two motorbikes are different lengths. The lengths both round down to 2m.

There is a difference of 0.2m between the actual lengths of the two bikes.

Is what the mechanic says possible? Explain your answer.

Eva says,

I know that $\frac{3}{4}$ is equivalent to $\frac{3}{8}$ because the numerators are the same.

Is Eva correct? Explain why.

Alex says:

If I know $\frac{1}{2}$ is 0.5 as a decimal, I also know $\frac{3}{6}$, $\frac{4}{8}$ and $\frac{6}{12}$ are equivalent to 0.5 as a decimal.

Explain Alex's thinking.

Key vocab: lines of symmetry, symmetric figure, classify, geometric shapes, quadrilaterals, acute angle, obtuse angle, co-ordinates, quadrant, grid, translate, translation, axis, x- axis/y-axis spaces, unit, plot, point, polygon, isosceles/equilateral/scalene, parallelogram, trapezium

NC Objectives:

- Complete a simple symmetric figure with respect to a specific line of symmetry.
- Identify lines of symmetry in 2D shapes presented in different orientations.

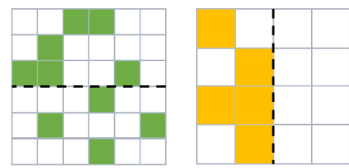

Concrete

Using folding, find the lines of symmetry in these shapes.

Pictorial

Colour the squares to make the patterns symmetrical.

Sort the shapes into the groups.

- 1 line of symmetry
- 2 or more lines of symmetry

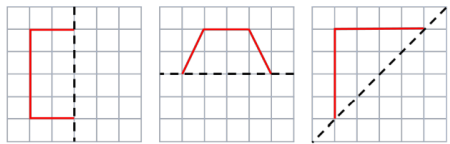

4. Match the children's statements to the shapes they describe.

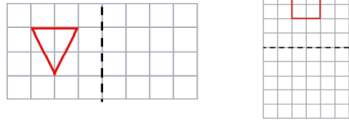

Jack: My shape has 3 lines of symmetry.
 Brad: My shape has 2 lines of symmetry.
 Jordan: My shape has 5 lines of symmetry.
 Isobel: My shape has 6 lines of symmetry.

Complete the shapes according to the line of symmetry.

Reflect the shapes in the mirror line.

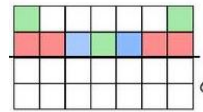

Sort the shapes into the table.

| | 1 line of symmetry | More than 1 line of symmetry |
|-------------------|--------------------|------------------------------|
| Up to 4 sides | | |
| More than 4 sides | | |

Copy the symmetrical pattern.

Abstract

Reasoning

 Dora: When given half of a symmetrical shape I know the original shape will have double the amount of sides.

Do you agree with Dora? Convince me.

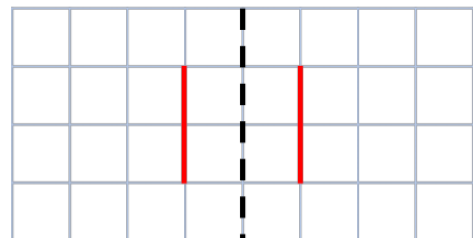

Are the lines of symmetry correct?

How many symmetrical shapes can you make by colouring in a maximum of 6 squares?

How many different symmetrical shapes can you create using the given sides?

Always, Sometimes, Never.

A four-sided shape has four lines of symmetry.

 Jack: A triangle has 1 line of symmetry unless you change the orientation.

Is Jack correct? Prove it.

Geometry

Key vocab: lines of symmetry, symmetric figure, classify, geometric shapes, quadrilaterals, acute angle, obtuse angle, co-ordinates, quadrant, grid, translate, translation, axis, x-axis/y-axis spaces, unit, plot, point, polygon, isosceles/equilateral/scalene, parallelogram, trapezium

NC Objectives:

- Describe positions on a 2D grid as coordinates in the first quadrant.
- Describe movements between positions as translations of a given unit to the left/right and up/down.
- Plot specified points and draw sides to complete a given polygon.

Concrete

Pictorial

4. Each shape below needs to be translated 4 squares to the right and 3 squares down. Draw the shape in its new position and write its new coordinates.

1. Write down the coordinates of these objects:

2. Write down what you can see at the coordinates below:

- a) (5, 4) _____
 b) (10, 3) _____
 c) (2, 9) _____

3. Draw a firework of your choice on (7, 2).

Abstract

Reasoning

Different ways

Think of possible coordinates for the blue dot.

Could the coordinates of the blue dot be:

- (3,5)
(5,3)
(10,9)

Always, Sometimes, Never.

The number of points is equal to the number of vertices when they are joined together.

Draw

Draw a dot to show the approximate position of the coordinate point (6,4):

When you are plotting a point on a grid it does not matter whether you go up or across first as long as you do one number on each axis.

Amir

Do you agree with Amir? Convince me.

Tommy has described the translation from A to B as 3 right and 4 up.

Can you explain his mistake?

Here is a game to play in pairs:

Each player needs:

- 1 small cube
- One barrier (e.g. a mini whiteboard)

The first player places a cube on their grid. They describe the original position and perform a translation.

The second player listens to the instructions and performs the same translation.

They check to see if they have placed their cube at the same coordinate.

Swap roles and repeat several times.

Which clue matches which coordinate?

Clue 1 My x coordinate is half of my y coordinate.

Clue 2 My y coordinate is less than my x coordinate.

Clue 3 Both my coordinates are prime numbers.

Statistics

Key vocab: time graphs, comparison problems

NC Objectives:

- Interpret and present discrete data using appropriate graphical methods, including:
 - bar charts
 - time graphs
- Solve comparison, sum and difference problems using information presented in bar charts, pictograms, tables, and other graphs.
